

## Safest Airlines

As visual beings, we process visuals 60 000 times faster than a text. Furthermore, 90% of the information that is transmitted in our brains is, you guessed it, also visual. With that being said, the images have always been the preferred method for data communication and learning. From the creation of the first maps and the first illustrated scientific works to the beautifully designed *Infographics*, we have nowadays. I have researched on airline safety data, and it was a very interesting research. Anyway, not going kill you with the boredom to read this (assuming you all have read my blog). Enjoy the comparison chart. Thank you.
